Indigo Care provides a pressure sensitive USB Premium Bed Sensor Mat that is specifically designed to be used with our multifunctional USB Transmitter (RTU) and that will immediately alert staff when a resident leaves their bed. The bed mat is more comfortable and less noisy as the mat's thickness is 12mm with a soft touch and feel for the user which ensures the noise created due to contact is minimal. The USB plug provides a strong, secure electrical connection that increases the sensor mat's strength and durability while extending its lifespan. The USB Transmitter (RTU) has an exclusive ID encoded RF Transmitter which communicates with the Cordless Receiver Box (RRU) or Dual Function Universal Call Point (USPV5.1). It allows the USB Bed Sensor Mat to wirelessly transmit an alarm to the call point. Simply connect the USB Transmitter to the USB Bed Sensor Mat. Then pair the USB Transmitter to the RRU by following the instructions printed on the receiver box. The sensor mat will now trigger the call point when activated within the transmitting area. It can be integrated to most nurse call systems.
(Note: USB Transmitter and USB Bed Sensor Mat can be ordered separately)
